Is your PC driving you mad? Slow, Sluggish performance?

There are a couple of things you could do - and a few favourite pieces of software to run.

- Defragment your hard drive. It never ceases to amaze us the number of badly fragmented hard drives we see. This can really affect performance.
- Clear out temporary files. Again, this can slow pc's really down. If you're comfortable doing this - it's worth doing. But be aware, it can be tricky! If you're not sure, then get someone who is!
- GET MORE RAM. Ram is cheap nowadays. Get more - your PC will thank you for it!
